## HY Piston Pump

Swash plate design axial Fixed & Variable piston pump

Apply to open circuits

Size:2.5-320

Normal pressure :315 bar

Peak pressure : 400bar

**HY 125 Y -- R P**

**Pump Type :**

- ◆ High pressure sloping cam plate axial piston pump
- ◆ Rated Pressure is 315 bar
- ◆ Max Pressure is 400 bar
- ◆ SAE flange jointing with oil inlet & outlet
- ◆ Open Loop

**Displacement:** 2.5,10,16,18,25,28,32,40,  
(ml/r) 45,55,63,71,80,90,  
100,125,140,160,200,  
225,250,280,300

**Shaft Extension:** P—Key(GB1096-79)

Z—Splined(DIN5480)

S—Splined shaft(GB3478.1-83)

**Turning(See from shaft end):** R—clockwise

L-- anticlockwise

M—Fixed Displacement

**Control Means:** Y—constant power variable

P—constant pressure variable

B—Electrohydraulic proportion

S—Manual variable

YP— constant power and pressure

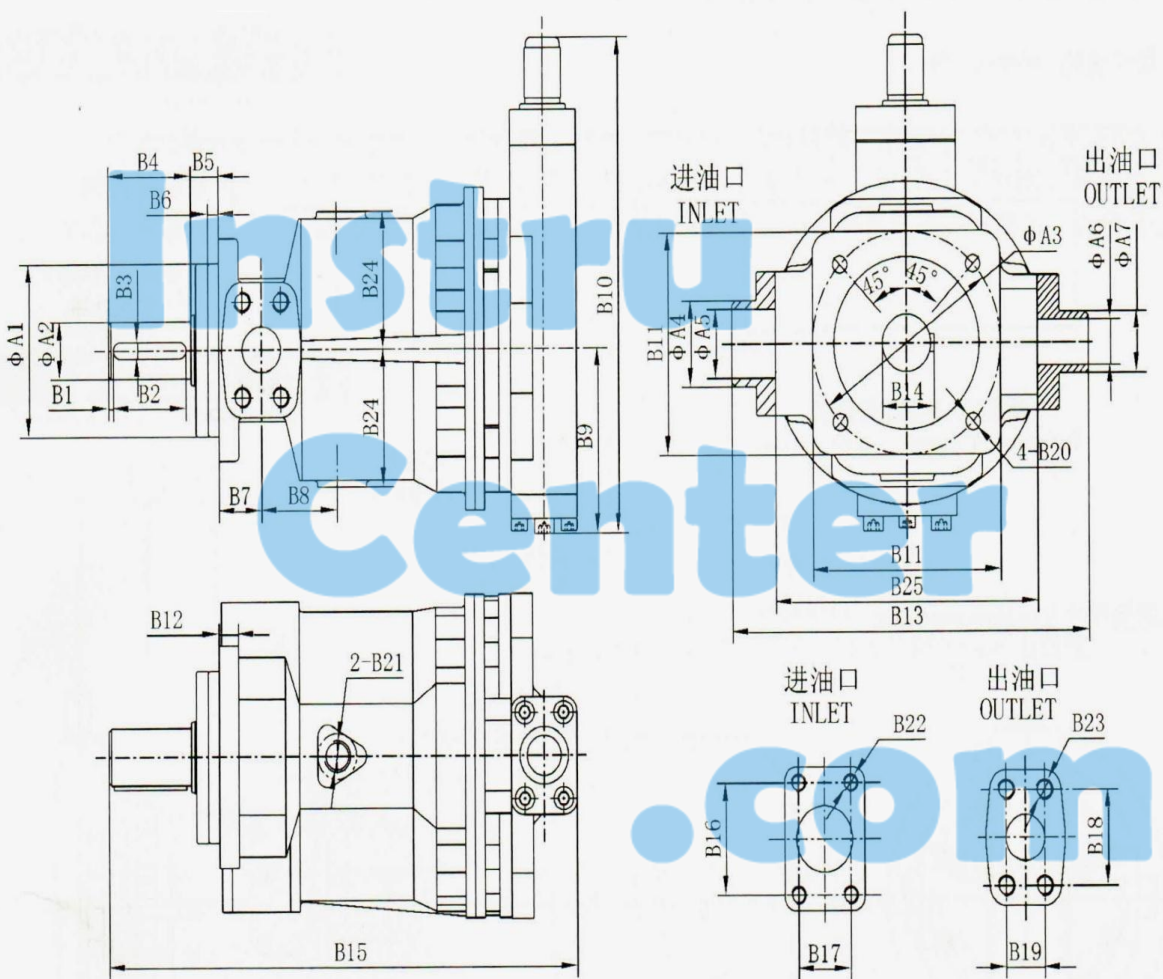

DP—Electromagnetism unload constant pressure

DY—Electromagnetism unload constant power

DYP—Electromagnetism unload constant power and pressure

**Rexport****HY Piston Pump****DESIGN FEATURE:**

- 1, Swash plate design axial variable piston pump used in open circuit.
- 2, Continuous work pressure can reach 315bar, The highest instantaneous work pressure can reach 400bar.
- 3, The flow is directly proportional to the drive rotate speed and the displacement, and can make stepless variable come true by adjusting the obliquity of the swash plate.
- 4, Multiplicate energy saving of control ways eg. Constant pressure, Constant power etc. and the control response is very fast.
- 5, Low noises level, High efficiency, High reliability and timeproof.
- 6, Small volume, High power density.
- 7, Excellent oil absorbency.
- 8, Can supply standard SAE flange.

## 四、Installation Notes

Optional installation position. The displacement over 160L/min can't be installed on the reservoir and should ensure the reservoir cover have enough rigidity. The concentricity (verticality)  $\leq 0.05\text{mm}$ . The pump housing must be filled with fluid during commissioning and remain full when operating. In order to attain the lowest noise level, all connections (suction, pressure, case drain ports) must be linked by flexible couplings to tank. Avoid placing a check valve in the case drain line.

### 1. Vertical installation (shaft end upwards)

The following installation conditions must be taken into account:

#### 1.1. Arrangement in the reservoir

Before installation fill pump housing, keeping it in a horizontal position.

a) If the minimum fluid level is equal to or above the pump mounting

face close port "outlet 2" plugged, leave port "outlet 2" and "inlet" open, "outlet 2" piped and recommendation inlet piped (see Fig.1).

Fig. 1

b) If the minimum fluid level is below the pump mounting face pipe port "outlet 1" and "inlet" according to Fig 2

Close port "outlet 2" with respect taking into consideration. Conditions in 1.2.1.

#### 1.2. Arrangement outside the reservoir

Before installation fill the pump housing, keeping it in a horizontal position. For mounting above reservoir see Fig. 2.

Limiting condition:

1.2.1. Minimum pump inlet pressure  $p_{abs\ min} = 0.8\text{bar}$  under both static and dynamic conditions.

Note: Avoid mounting above reservoir wherever possible in order to achieve a low noise level.

Fig.2

1.2.2 The permissible suction height  $h$  comes from the overall pressure loss, but may not be bigger than  $h_{\max} = 500\text{ mm}$  (immersion depth  $h_{\min} = 200\text{ mm}$ ).

### 2. Horizontal installation

The pump must be installed, so that "outlet 1" is at the top.

#### 2.1. Arrangement in the reservoir

a) If the minimum fluid level is above the top of the pump, port "outlet 2" closed, "outlet 1" and "inlet" should remain open, "outlet 1" piped and recommendation "inlet" piped (see Fig. 3)

Fig. 3

b) If the minimum fluid level is equal to or below the top of the pump, pipe ports "outlet 1" and possibly "inlet" as Fig. 4.; close port "outlet 2".

The conditions according to item 1.2.1.

#### 2.2. Installation outside the reservoir

Fill the pump housing before commissioning. Close the port "outlet 1"

a) When mounting above the reservoir, see Fig. 4.

Conditions according to 1.2.1.

Fig. 4

b) Mounting below the reservoir Pipe ports "outlet 1" and "inlet" according to Fig.5, close port "outlet 2"

Fig.5
